

## **Commercial Wireless Platform from Bosch Provides Easy-to-Install Intrusion Solution**

July 15, 2009

*Fairport, N.Y.* – Bosch Security Systems, Inc., a full-line manufacturer of high-quality security solutions, announced today a Commercial Wireless platform for its G Series Control Panels including a full line of wireless transmitters and detectors. Powered by Inovonics' wireless mesh network technology, the new platform delivers the range and reliability to scale from small commercial sites to large campuses with several buildings. The platform is ideal for applications where wiring is difficult or where mobile panic transmitters are essential.

Without the need to run wiring between components, the Commercial Wireless platform can significantly reduce the installation time required for an intrusion system. The new platform also provides wireless registration and programming for transmitters to further enhance the efficiency of technicians during system set-up. In addition, a portable Site Survey Kit helps installers easily determine the optimum location for transmitters and repeaters.

The Commercial Wireless platform sends redundant information on several multi-frequency channels within the wireless 900 MHz band, providing superior performance and reliability over single frequency technology that is easily disrupted by interference. Powerful transmitters and advanced signal processing also offer improved reception by reducing dead spots in transmission areas.

Available only to Bosch direct dealers, this exclusive platform enables customers to build service revenue opportunities by helping to reduce account attrition after installation.

### **Wide Range of Supported Products**

Receivers seamlessly integrate a wide-range of transmitters into a wireless network with Bosch G Series Control Panels and provide individual point annunciation with trouble conditions. With the breadth of supported

transmitters and detectors, the wireless solution from Bosch meets the security needs of end users with even the most stringent requirements.

- Pendant Transmitters are available with a single-button design, which is ideal for assisted living facilities, or with two buttons to reduce accidental activation. They can also be mounted for fixed position signaling.
- Universal Transmitters make any normally open or normally closed sensor a wireless device and work with holdup buttons, pressure mats, temperature sensors and other devices.
- Motion detectors include ceiling and wall mount as well as pet-friendly and high-traffic models.
- Specialty transmitters are available for special applications, including smoke and glass break detection, as well as for high security applications, such as retail or banking.
